JQuery:

Always have your jquery cdn at the end of website and before your jquery source file

"/home/christine/SRABactome/Assembleoutput/Prokka_Output/"

Code notes:
```
//$ is jQuery, use it to select hi (like query selector)
//$("h1").css("color","red");
console.log($("h1").css("font-size"));
$("h1").addClass("big-title margin-50");
$("h1").text("bye") //this will change the h1 text
//$("h1").removeClass("big-title");
//document.querySelectorAll("button")
$("button").html("<em>Hey</em>") //change the html tags

//selecting the attribute
console.log($('img').attr("src"))
//set the attribute, add a second argument
$("a").attr("href", "https://mail.google.com/mail/u/2/?tab=wm&ogbl#inbox")
//can also do it to get class
$("h1").attr("class");

//add event listener, example
$("h1").click(function () {
$("h1").css("color", "purple");
})

//normal javascript change color
//for (var i = 0 ; i < 5 ; i ++ ){
// document.querySelectorAll("button")[i].addEventListener("click",function(){
// document.querySelector("h1").style.color = "purple";
// })
//}

//with Jquery, by selecting button, jquery will look through all the buttons
$("button").click(function () {
$("h1").css("color", "purple");
})

$("input").keypress(function (event) {
$("h1").text(event.key);
});

//the method "on" for event listener => takes two parameters, the first one is the "event", adn second is
function
$("h1").on("mouseover", function () {
$("h1").css("color", "yellow");
})

//add element
$("h1").before("<button>before</button>");
$("h1").after("<button>after</button>");
$("h1").prepend("<button>prepend</button>"); //add into the item just after the opeening tag
$("h1").append("<button>append</button>"); //add into the item just after the opeening tag
```

```
//jquery animation
$("button").on("click", function () {
$("h1").hidden();
$("h1").toggle(); //just disapear
$("h1").fadeOut(); //allow more progressive movement,opposite is fade in
$("h1").fadeToggle();
$("h1").slideUp();
$("h1").slideToggle();
$("h1").animate({ //use css to build a animation
opacity: 0.5 //you can't change the color, has to be a numeric value
})
//you can chain the animations
$("h1").slideUp().slideDown().animate({
opacity: 0.5,

})
})
```
